

1. Install from a Ubuntu 8.04 desktop-i386.iso
2. Install all updates
3. Copy the file named ib1v-install.tar.gz onto the Desktop and unzip the file.
4. Install mouseemu
 - 4.1 From the menu bar,
select System->**Administration->Synaptic Package Manager**
** The search option can be used to locate "mouseemu"
 - 4.2 Select **Mark for Installation**
 - 4.3 Select **Apply to be installed**
 - 4.4 Select **Apply**
5. Go to the Terminal application which is located on the menu bar
Applications->Accessories ->Terminal
6. Using the Terminal, go to the ib1 directory using the cd command. For example,
cd /home/numonics/Desktop/ib1/
7. Once in the ib1 directory, type sudo ./ibinstall_dbus.sh
8. Press the **ENTER KEY**.
9. From the menu bar, select **System->Preferences->Sessions**.
10. Click the "+ Add" button to bring up the New Startup Dialog
and enter:
Name: ibserver
Command: ibstart
11. Press **Ok**
12. From a terminal window, start the server with: sudo ibserver .
13. Press the **ENTER KEY**. (Alternatively, the computer can be restarted) for step 12.
14. Open the calibrate window from the menu bar:
Applications->Accessories->ibcalibrate
